Getting Started

Your PowerBook has been designed so that you can set it up quickly and start using it right away. If you have never used a PowerBook or are new to Macintosh computers, read this section for instructions on getting started and where to get more information.

If you are an experienced user, you may already know enough to get started. Be sure to look over the information in Chapter 2, "Getting to Know Your Computer," to find out about the new features of this PowerBook.

S-video-to-composite adapter

DVI-to-VGA adapter

AC plug

Phone cord   Power adapter   AC cord
Important Read all the installation instructions and safety information (see page 81) carefully before you plug your computer into a wall socket.

Plugging In the Computer

Plugging in the power adapter provides AC power to the computer and recharges the computer's battery. You should plug in the power adapter in case the battery has been drained during shipping or storage.

Important If you use a power adapter other than the one that came with your computer, make sure it is a 65-watt (W) Apple Portable Power Adapter.

1   Insert the AC plug on the power adapter into a wall outlet. If you want to extend the reach of your power adapter, remove the AC plug from the adapter and attach one end of the included AC cord to the adapter. Plug the other end into a wall outlet. Use only the AC cord that came with your power adapter.

AC plug   Power adapter plug   Power adapter port   Internal modem

AC cord   Telephone cord
2   Plug the power adapter plug into the power adapter port (marked with the icon ⎓) on the left side of the computer. Make sure to push the power plug snugly into the power adapter port to ensure it is engaged and power is flowing to the computer.

When the power adapter is connected properly, a light appears on the plug. An amber light indicates that the battery is being charged. A green light indicates that the battery is fully charged. You can monitor the battery level using the battery icon in the menu bar, or by checking the charge lights on the bottom of the battery (see page 53).

You can wrap any excess adapter cable around the clips on the power adapter.

When disconnecting the power adapter from an outlet, pull the plug, not the cord.

Calibrating Your Battery for Best Performance

To get the longest running time from your PowerBook battery, let the battery run down completely during the first week you have your PowerBook. Then fully charge it one time. Follow these steps:

1 Plug in the power adapter and fully charge your PowerBook battery until the battery indicator lights and the onscreen meter indicate that the battery is fully charged. A green light on the power adapter plug also indicates that the battery is fully charged.

2 Disconnect the power adapter and use your PowerBook. When your battery gets low, you will see the first low battery warning dialog on the screen. Continue to use your PowerBook until it goes to sleep; at that point the battery has been sufficiently drained for calibration.

3 Connect the power adapter and leave it connected until the battery is fully charged again.

Important You have to fully discharge and then charge your battery only once to calibrate it. After that, you can connect and disconnect the power adapter when the battery is at any charge level.

Connecting the Internal Modem

If you want to connect to the Internet right away, connect one end of the included phone cord to the modem port (marked with the icon ✆) on the left side of the computer, and the other end to an analog telephone line (the type of telephone line found in most residences). When you turn on your PowerBook for the first time, a Setup Assistant walks you through the rest of the steps necessary for connecting to the Internet. For more detailed information, see Appendix C, "Connecting to the Internet."

Warning Do not connect a digital telephone line to the modem, because the wrong type of line could damage the modem. Contact your telephone service provider if you are unsure whether you have a digital telephone line.

Opening the Display

1 Push the display release button.
2 Open the display and position it at a comfortable viewing angle.
Note: Your display is designed to open 130 degrees. If you meet resistance, do not attempt to force the display open farther.

Turning the Computer On

To turn on the computer, press the Power button (⏻). You should hear a tone when you turn on the computer. It takes the computer a few moments to start up. This is normal. When you press the Power button, the PowerBook checks its memory before it starts up. The more memory installed, the longer the delay.
⏻ Power button

Problems Turning the Computer On?

Nothing happens when you press the Power button.

- Make sure the battery is properly installed. Push the silver button on the battery to check its charge. See "Battery" on page 53.
- The battery may be drained. Make sure that you plugged the power adapter firmly into both the computer and a power source.
- If the computer still doesn't start up, see page 73 for more troubleshooting suggestions.
- If you are using a power adapter other than the one that came with your computer, make sure it is a 65 W Apple Portable Power Adapter.

You see a picture of a disk or a folder with a blinking question mark.

- This icon usually means that the computer can't find system software on the hard disk or any disks connected to the computer. You may need to reinstall system software. See page 73.

Moving Items on the Screen

You use your PowerBook trackpad to move and select items on the screen, much as you use a mouse with a desktop computer. To move the arrow pointer on the screen, slide your finger across the trackpad. To select, click, or double-click an item on the screen, use the trackpad button.

Note: Instead of using the trackpad button, you can select, click, and double-click directly on the trackpad. You turn on this and other trackpad options in the Mouse pane of System Preferences.

Trackpad   Trackpad button
The trackpad is sensitive to how quickly you move your finger. To move the pointer a short distance across the screen, move your finger slowly across the trackpad. The faster you move your finger, the farther the pointer moves on the screen.

Tips for Using the Trackpad

For best results when using the trackpad, keep in mind these tips:

- Use only one finger.
- Do not use a pen or any other object.
- Keep your finger and the trackpad dry. If the trackpad becomes moist from humidity or condensation, gently wipe it with a clean cloth before you use it.
- Never use any kind of cleaning solution on the trackpad.
- If you are using the trackpad and the keyboard at the same time, and the trackpad is not responding accurately, the computer may be set to ignore the trackpad while you are typing. You can change this setting in the Mouse pane of System Preferences.

For more information on using the trackpad, see Mac Help, located in the Help menu.

Adjusting the Internal Display

Once you begin working with your new PowerBook, you may need to adjust your display so that items on the screen are easier to see.

Adjusting the Display Brightness and Keyboard Illumination

Your PowerBook is equipped with an ambient light-sensing (ALS) system. Sensors under the speaker grilles automatically adjust the brightness of your display and keyboard illumination according to the light available in your current environment. You can also adjust the automatic brightness settings of your display and keyboard manually, using the brightness control keys and the keyboard illumination control keys.

To turn off the automatic display brightness feature, open the Displays pane of System Preferences and deselect the automatic brightness checkbox. You can turn off the keyboard illumination feature in the Keyboard pane of System Preferences or by pressing the F8 key.

Note: Even when the keyboard illumination feature is on, the keyboard illuminates only in low-light situations.

Brightness controls

Keyboard illumination controls

ALS sensor

ALS sensor
Resolutions Supported by the Built-in Display

Your PowerBook has a wide-screen display that has a standard (sometimes called "native") resolution of 1440 x 900 and that supports standard resolutions such as 1024 x 768.

You may want to use a standard resolution when mirroring your display on an external monitor or when using certain applications (such as games or presentation software) that are designed for a standard resolution. Most applications automatically switch to the best resolution for them.

When you use a standard resolution, a black band appears on each side of the display. If you use an application designed for a standard resolution and do not want to see the black bands, you can choose the "stretched" version of the resolution to stretch the image to cover the entire screen and eliminate the black bands.

You can choose a resolution of 1152 x 768 or smaller from the Displays pane in System Preferences. These are known as "scaled resolutions." When you switch to a scaled resolution, items on the screen appear larger, making them easier to see.

Note: Scaled resolutions may not be as sharp as the display's native resolution.

Adjusting the Display Resolution

You can increase the size of images on your display by switching from the standard resolution to a scaled resolution.To adjust the resolutions on your display, open the Displays pane of System Preferences. To quickly access your display settings from the menu bar, click "Show displays in menu bar."

Where to Go From Here

You've done everything you need to get your PowerBook up and running. The first time you turn your computer on, the Macintosh Setup Assistant takes you through the process of configuring your computer and setting up for the Internet. Internet access usually requires an account with an Internet service provider (ISP). Fees may apply.

If you would like additional information, see the following:

To learn about...	See...
Shutting down your computer or putting it to sleep	"What to Do When You Are Finished Working" on page 17.
What you can do with the hardware and software features of your PowerBook	Chapter 2, "Getting to Know Your Computer."
The additional information available in the onscreen help	"Mac Help—Answers to All Your Macintosh Questions" on page 39.
Using a specific feature of your PowerBook	Chapter 3, "Using Your Computer."
Installing memory	Chapter 5, "Adding Memory to Your Computer."
What to do if you have a problem with your PowerBook	Chapter 6, "Troubleshooting."

What to Do When You Are Finished Working

When you have finished working with your PowerBook, you have two options.

Put Your PowerBook to Sleep

If you will be away from your PowerBook for only a short time, put the computer to sleep. When the computer is in sleep, you can quickly wake it and bypass the startup process. When the computer is in sleep, its screen is dark and a small white light on the display release button pulsates.

To put the computer to sleep, do one of the following:

- Close the display.
- Press and release the Power button and then click Sleep.
- Choose Apple ($\bullet$) > Sleep (click the Apple menu and choose Sleep).

  Warning Wait a few seconds until the sleep light starts pulsating (indicating that the computer is in sleep and the hard disk has stopped spinning) before you move your PowerBook. Moving your computer while the hard disk is spinning can damage the hard disk, causing loss of data or the inability to start up from the hard disk.

To wake the computer:

- *If the display is closed,* open it. Your PowerBook wakes from sleep when you open the display.
- *If the display is already open,* press the Power button ($\bigcirc$) or any key on the keyboard.

Shut Down Your PowerBook

If you will not use your PowerBook for a day or two, shut it down. Do one of the following:

- Choose Apple ($\bullet$) > Shut Down.
- Press the Power button and click Shut Down in the dialog that appears on the screen.
- If you plan to store your PowerBook for an extended period of time, see "Storing Your PowerBook" on page 81 for additional steps to prevent your battery from draining completely.

Getting to Know Your Computer

If you're eager to get started and want to try out a few things on your PowerBook, this chapter is for you. It provides an overview of your computer's hardware and software features along with the unique Internet services available to Mac owners.

Your PowerBook is a full-featured notebook computer. It includes the latest in computer technology such as a PowerPC G4 processor, FireWire and USB ports, Bluetooth wireless connectivity, and integrated AirPort wireless Internet and networking. Your computer also comes with the Mac OS X operating system, whose features enable you to use the Internet to watch video, research information, shop, and update your software automatically.

Your PowerBook comes with several software applications for doing things like sending email, surfing the Internet, chatting online, organizing music and digital photos, making movies, and much more. This chapter describes these applications and tells you where to find more information about using them. Read on to learn more.

Note: Because Apple frequently releases new versions and updates to its system software, applications, and Internet site, images shown in this manual may be slightly different from what you see on your screen.

Increase or decrease the brightness of your keyboard illumination.

Num Lock key

Activate the numeric keypad embedded in the PowerBook keyboard. When the numeric keypad is locked, a green light glows on the keyboard lock key.

⊟ Video Mode Toggle key

Use this key to switch between dual display mode and video mirroring mode.

▲ Media Eject key

Press and hold this key to eject a CD or DVD disc. You can also eject a disc by dragging its desktop icon to the Trash.

Microphone

Record sounds directly on your PowerBook hard disk with this built-in microphone (located under the left speaker cover).

Built-in speakers (2)

Listen to music, movies, games, and multimedia.

Function (Fn) key

Press and hold this key to activate the function keys (F1 to F12).

Sleep light indicator

A white light pulsates when the PowerBook is in sleep.

Display release button

Push this button to release your display and open your PowerBook.

Trackpad

Move the pointer on the PowerBook display.

Slot-loading SuperDrive

Your SuperDrive can read CD-ROM discs, Photo CDs, standard audio discs, DVD-ROM and DVD-R discs, DVD movies, and other kinds of media. It can also write music, documents, and other digital files on CD-R, CD-RW, and DVD-R discs.

⏻ Power button

Turn your PowerBook on and off or put it to sleep.

AirPort antenna window

With an optional AirPort Base Station, or other wireless hub, connect to the Internet wirelessly.

Additional Features of Your PowerBook

- **Power adapter port**
- **USB port**
- PC Card slot
- **Security slot**
- **Internal modem port**
- **Audio line in port**
- **Headphone port**

- **FireWire 800 port**
- **TV out port**
- **USB port**
- **FireWire 400 port**
- **Gigabit Ethernet port (10/100/1000Base-T)**
- **DVI port**
Security slot

Protect your PowerBook by connecting a security cable.

⎓ **Power adapter port**

Plug in the included Apple Portable Power Adapter to recharge your PowerBook battery.

✆ **Internal modem port**

Connect a standard phone line directly to the internal modem.

⁎ **Two USB (Universal Serial Bus) ports**

Connect additional equipment to your PowerBook, such as printers, external storage devices, digital cameras, modems, keyboards, and joysticks.

PC Card slot

Expand the capabilities of your PowerBook using the Type II slot that supports both PC Card and CardBus formats.

◖◗ **Audio line in port**

Connect your PowerBook to a line-level microphone or other audio equipment.

⌒⌒ **Headphone port**

Connect external speakers, headphones, or other sound output devices.

⦙ **Two FireWire ports**

Connect high-speed external devices, such as digital video cameras, printers, and external storage devices. You can connect a standard 6-pin FireWire device directly to the FireWire 400 port, or you can use a 9-to-6-pin FireWire cable to connect the device to the FireWire 800 port. You can also directly connect a 9-pin FireWire device to the FireWire 800 port. For more information, see page 44.

‹··› **Ethernet port (10/100/1000Base-T)**

Connect to a high-speed 10/100/1000Base-T Ethernet network or connect to another computer and transfer files. The Ethernet port auto-sensing feature detects other Ethernet devices. You don't need an Ethernet crossover cable to connect to other Ethernet devices.

▣ **TV out (S-video out) port**
OUT

Connect your PowerBook to a television, VCR, or other video device. You can use the TV out port for presentations or to play a DVD-Video on your television.

|□| **External monitor (DVI) port**

Connect to an external monitor or projection device that uses a DVI connector, or use the included DVI-to-VGA adapter to connect a VGA monitor. You can also use a DVI-to-ADC adapter (sold separately) to connect to an Apple flat-panel display.

Inside Your PowerBook

Memory cover

Memory slots (2)

Battery

Serial number
Memory slots

Your PowerBook comes with two memory slots, one above the other. The lower slot contains the memory module that came with your PowerBook. You can install an additional memory module in the upper slot. (If you ordered your PowerBook with additional memory, the upper slot may already be filled.) The maximum amount of RAM you can install in your PowerBook is 1 gigabyte (GB), using a 512 megabyte (MB) memory module in each slot. For instructions, see "Installing Additional Memory" on page 65.

Battery

Your PowerBook comes with a battery that provides power when the external power adapter is not connected. For more information, see page 53.

About Mac OS X

What You Can Do

Mac OS X provides a powerful and elegant user interface for your computer. With Mac OS X, you don't need to worry about how much memory to allot for an application to run efficiently or restarting your computer if there's a problem with one application. In addition to using Mac OS X software, you can still run Mac OS 9 versions of software in Mac OS X using the Classic environment. Chapter 4, "Working With Your Operating System," on page 63 explains the Classic environment in more detail. Mac OS X also supports Java and UNIX-based software.

System Preferences is your command center for all of your computer settings, from changing the appearance of your desktop to setting up network access information. The Finder and Dock provide easy access to folders, applications, documents, and other items on your computer and network.

To Learn More

■ For instructions on how to customize your Mac OS X environment and information about using Mac OS X, see *Welcome to Mac OS X,* a document on your computer's hard disk (in Documents/Learn More About Your Mac).

■ For the latest information on Mac OS X, go to the Mac OS website at www.apple.com/macos.

.Mac—Internet Services for Mac Users

What You Can Do

.Mac is a new class of Internet services from Apple created exclusively for Mac users. With a .Mac account, you can send email or electronic greeting cards and share photos and movies. You can back up important files, create your own website, and more. To use .Mac, you must have an account with an Internet Service Provider (ISP).

To Learn More

■ Go to www.mac.com.

To Sign Up

■ Open System Preferences and click Internet. Click .Mac and then click Sign Up.

Sherlock—Your Internet Search Detective

What You Can Do

Sherlock is your search detective and personal shopper on the Internet. It provides an easy way to find people, news, and just about anything. Shop for books and music, search auction sites, find the best prices—even check product availability. Look up movie times at your local theaters, watch movie trailers, and buy tickets. Find flight information, stock quotes, phone numbers, and driving directions. Get definitions, news, language translations, and more.

To Learn More

■ Open Sherlock and choose Help > Sherlock Help.

■ Go to www.apple.com/sherlock.

Note: Sherlock's Yellow Pages channel may be known by a different term outside the United States.

Apple.com—Your Starting Place on the World Wide Web

What You Can Do

Whether you're looking for information about Apple products or for services, support, and technical information, Apple websites help you get the most from your computer.

To Learn More

Visit the following websites for more information:

■ Apple Store: www.store.apple.com

■ Apple Support: www.apple.com/support

■ Macintosh Products Guide: www.apple.com/guide

■ Mac OS X: www.apple.com/macosx

QuickTime—Audio and Video on the Internet

What You Can Do

In addition to playing video and music files on your Mac, with QuickTime you can watch live and recorded Internet broadcasts.

To Get Started

1 Connect to the Internet.

2 Open QuickTime Player.

3 Click the QuickTime button and select a channel to get the latest video, music, and information over the Internet without having to store files on your hard disk.

To Learn More

Internet video is just one of the things you can do with QuickTime. To learn more:

- Open QuickTime and choose Help > QuickTime Help.
- Go to www.apple.com/quicktime.

iMovie—Create and Edit Your Own Digital Movies

What You Can Do

iMovie is an easy-to-use digital video editing program. With iMovie and a digital video camcorder, you can create and edit your own movies. Import video from the camera; edit clips; and add transitions, titles, sound effects, and music.

To Learn More

- Open iMovie and choose Help > iMovie Help.
- Go to the iMovie website at www.apple.com/imovie for the latest on iMovie, including updates, additional plug-ins, and a list of compatible DV camcorders.

iPhoto—Organize, Edit, and Share Your Digital Photographs

What You Can Do

With iPhoto you can import pictures from your digital camera, organize them into albums, edit and enhance them, and share them in a number of different ways. Once you see what iPhoto can do with digital pictures, you may never go back to using a film camera. Simply plug your digital camera into the USB port on your Macintosh and iPhoto opens, imports your photos, catalogs them, stores them, and displays them on your screen.

To Learn More

- Open iPhoto and choose Help > iPhoto Help.
- Go to the iPhoto website at www.apple.com/iphoto.

iDVD—Create and Burn Your Own DVDs
What You Can Do

You can use iDVD to burn DVDs on blank DVD-R discs. Turn your iMovies, digital photos, and other QuickTime media files into DVDs that can be played on most standard DVD players.

To Learn More

- Open iDVD and choose Help > iDVD Help.
- Go to the iDVD website at www.apple.com/idvd.

iTunes—Digital Music for Your Mac and iPod

What You Can Do

With iTunes you can import songs from music CDs as MP3 files, create playlists, move music to your iPod or other portable MP3 player, listen to hundreds of radio stations on the Internet, and more. Use iTunes to rearrange music to suit your tastes and create your own audio CDs.

To Learn More

- Open iTunes and choose Help > iTunes Help.
- Go to the iTunes website at www.apple.com/itunes.

Auto Updating—Automatically Keep Your Mac on the Cutting Edge

What You Can Do

Connect to the Internet and use Software Update (in System Preferences) to automatically download and install the latest software versions, drivers, and other enhancements from Apple. Software Update instantly checks the Apple Internet servers to see if any updates are available for your computer. You can set your Mac to check the Apple server periodically and download and install updated software for you.

To Learn More

- For more information, search for "Software Update" in Mac Help.
- For the latest information on the Mac OS, go to the Mac OS website at www.apple.com/macos.

iChat—Chat With Friends Over the Internet
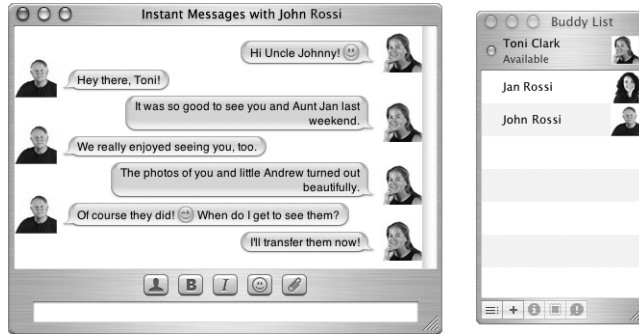

What You Can Do

If you are connected to the Internet, you can use iChat to have real-time text conversations online. Chat with other iChat users and with friends who use AIM (AOL Instant Messenger). You can also easily transfer pictures, documents, and other files while chatting. Log on to iChat using your .Mac user name or your AIM screen name.

To Learn More

- Open iChat and choose Help > iChat Help.
- Go to the iChat website at www.apple.com/ichat.

iCal—Organize and Share Your Calendars
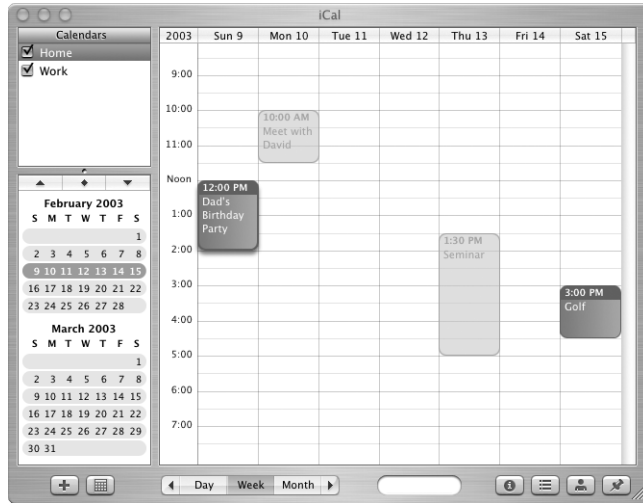

What You Can Do

iCal is a personal calendar application that helps you keep track of your appointments and events. View multiple calendars at the same time and share your calendars online with your colleagues, family, and friends using your .Mac account. Subscribe to other calendars to keep up with work schedules, family and school events, and more.

To Learn More

- Open iCal and choose Help > iCal Help.
- Go to the iCal website at www.apple.com/ical.

User Accounts—Turn One Mac Into Many
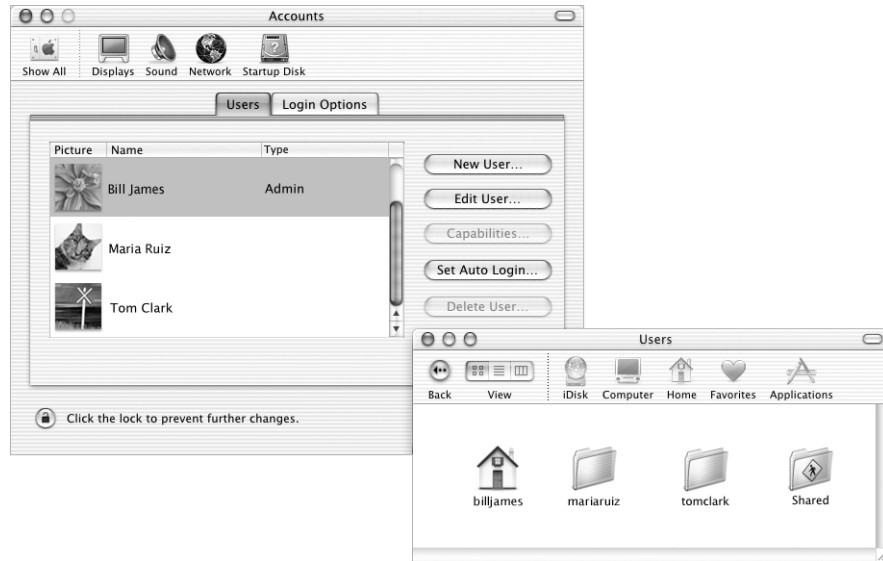

What You Can Do

Several people can share a single computer by logging in to their individual user account. Users can select their own customized settings, such as bookmarks and desktop views, and access their own private storage space, called "Home." Users sharing a computer also have access to a common Shared folder.

The first user account created on your computer is designated an administrator. Administrators are users with special privileges: They can give new users access to the computer, install software, and change general computer settings.

Note: If you forget the administrator password, you can reset it using the software installer disc that came with your computer. Start up from the software installer disc and choose Reset Password from the Installer menu. Because a user with the software installer disc can gain unrestricted access to the computer, you should keep the disc in a secure place.

To Learn More

- For more information on setting up user accounts in Mac OS X, search for "users" in Mac Help.

Mac Help—Answers to All Your Macintosh Questions
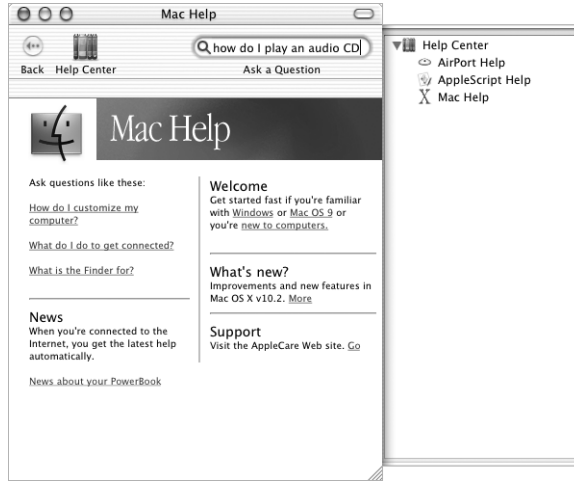

To Use Mac Help

1 Click the Finder icon in the Dock.

2 Choose Help > Mac Help (click the Help menu and choose Mac Help).

3 Type a question and press the Return key on your keyboard.

4 Double-click an item in the list of Help topics.

Using Your Computer

Your PowerBook has many built-in features and expansion capabilities you can use to customize and expand your computer to fit your needs, including:

- Universal Serial Bus (USB) for connecting additional equipment to your PowerBook, such as printers, scanners, joysticks, keyboards, digital cameras, and floppy disk drives.

- FireWire for connecting high-speed equipment, such as digital video cameras and external hard drives.

- The latest in communications technologies, such as a 56K modem, 10/100/1000Base-T Ethernet, Bluetooth wireless connectivity, and AirPort wireless Internet and networking.

- DVI video output with included DVI-to-VGA adapter gives you the ability to use your PowerBook with an external monitor, video projector, or many digital flat panel displays, including support for video mirroring and extended desktop (dual display) modes. Use the built-in composite and S-video support to play DVD-Video discs on your television.

- A long-lasting battery, one PC Card/CardBus slot, audio line in and out ports, and more.

To learn about what you can do with your PowerBook, start with the information in this chapter. Additional information can be found in Mac Help (see page 39) and on the many Apple Internet websites.

Universal Serial Bus (USB)

Your PowerBook comes with two USB ports ($\dot{\Psi}$), which you can use to connect many types of external devices, including printers, scanners, digital cameras, game pads, joysticks, keyboards, and floppy disk drives. USB makes it easy to connect external equipment. In most cases you can connect and disconnect a USB device while the computer is on. Once you connect the device, it is ready to use. You don't need to restart or reconfigure your computer.
Using USB Devices

To use a USB device with your computer, simply connect the device to the computer. Your computer automatically loads the correct software whenever you connect a new device.

Note: Apple has already included software to work with many USB devices. When you connect a USB device, if your PowerBook cannot find the correct software, you can either install the software that came with the device or follow the onscreen prompts to use the Internet to locate, download, and install the correct software.

USB Devices and Battery Power

USB devices, such as joysticks and keyboards, that get power from the USB connection instead of a separate power adapter can be used with your PowerBook. However, these types of USB devices can cause your PowerBook battery to become depleted faster. If you are going to have a device connected for an extended period, it is a good idea to plug the PowerBook into its power adapter.

Using Multiple USB Devices at the Same Time

If you want to use more than two USB devices at the same time, purchase a USB hub. The USB hub connects to an open USB port on your computer and provides additional USB ports (usually four or seven). Most USB hubs also have a power adapter and should be plugged into an outlet.

USB hub
For More Information on USB

Additional information on USB is available in Mac Help (see page 39). Choose Help > Mac Help and search for "USB." You can also find information on the Apple USB website at www.apple.com/usb.

For information on USB devices available for your computer, check the Macintosh Products Guide at www.apple.com/guide.

FireWire

Your computer has two FireWire ports ($\mathcal{Y}$). You can connect a standard 6-pin FireWire device directly to the FireWire 400 port, or you can use a 9-to-6-pin FireWire cable to connect the device to the FireWire 800 port. You can also connect 9-pin FireWire devices directly to the FireWire 800 port, for even faster connections. Both ports provide power to connected devices (so the devices don't need an additional power plug). With FireWire, you can easily connect and disconnect external high-speed devices—such as DV cameras, printers, scanners, and hard disks—without restarting your computer.

FireWire 400 port
(6-pin)

FireWire 800 port
(9-pin)
These are some of the things you can do with FireWire:

- Connect a digital video camera and capture, transfer, and edit high-quality video directly on your computer using video-editing software such as iMovie or Final Cut Pro.

- Connect a FireWire MP3 player, such as an Apple iPod.

- Connect an external FireWire hard disk drive and use it to back up data or transfer files. A FireWire hard disk icon appears on your desktop after you connect the drive to your PowerBook.

- Transfer files between your PowerBook and another computer using Target Disk Mode. See "FireWire Target Disk Mode" on page 45.

- Start up from an external FireWire hard disk. To do so, connect an external FireWire disk with a valid operating system installed on it, open the Startup Disk pane of System Preferences, click the FireWire disk, and restart your computer.

Using FireWire Devices

To use a FireWire device with your computer, connect the device to the computer and install any software that came with the device. Your computer automatically detects when you connect a new device.

FireWire Devices and Battery Power

Your PowerBook's FireWire ports provide power to connected FireWire devices, so you don't need to use an external power adapter. However, these types of FireWire devices can cause your PowerBook battery to become depleted faster. If a device will be connected for an extended period, it is a good idea to plug the power adapter into your PowerBook.

Note: The FireWire port is designed to support power for FireWire devices (up to a combined 7 watts maximum). You can connect multiple devices to each other and connect the "daisy-chain" of devices to the FireWire port on your computer, but only one device should get power from the computer. The rest of the devices in the daisy-chain should be powered by separate power adapters. Connecting more than one FireWire device that gets power from the computer may cause problems. If a problem occurs, shut down the computer, remove the FireWire devices, and restart your computer.

FireWire Target Disk Mode

If you want to transfer files between your PowerBook and another FireWire-equipped computer, or you have a problem that prevents your computer from starting up, you can use FireWire Target Disk Mode to connect to another computer.

To connect your PowerBook in FireWire Target Disk Mode, follow these steps:

1 Make sure that your PowerBook is shut down.

2 Use a FireWire cable to connect your PowerBook to another FireWire-equipped computer. You can use a FireWire cable with any combination of 6-pin and 9-pin connectors.

3 Start up your PowerBook and immediately hold down the T key. Your PowerBook display shows the FireWire logo. The other computer's display shows its own hard disk icon and the PowerBook internal hard disk icon.

4 When you are finished transferring files, drag the PowerBook hard disk icon to the other computer's Trash.

5 Press the Power button on the PowerBook to shut it down, and then disconnect the FireWire cable.

Note: Do not use FireWire Target Disk Mode on more than one FireWire port at a time.

Additional information on FireWire is available in Mac Help (see page 39). Choose Help > Mac Help and search for "FireWire." You can also find information on the Apple FireWire website at www.apple.com/firewire.

PC Cards

You can expand your computer's capabilities using the PC Card slot. Your PowerBook has one PC Card slot that accepts Type I or Type II PCMCIA cards, including CardBus-format cards. You can insert a PC Card when your computer is on, off, or in sleep.

PC Card slot

Eject button
Inserting and Ejecting a PC Card

When inserting a PC Card, make sure the label is facing up and the card is level. You'll feel some resistance as you slide the card in. When the card is firmly seated in the slot an icon appears on the desktop.

To eject a PC Card:

1   With the computer turned on, drag the card's icon to the Trash.

2   Push the PC Card eject button once to release the button.

3   Push the button again to eject the card.

4   Pull the card out of the slot and then push the eject button again to set it flush against the computer.

For More Information on PC Cards

For information on the PC Cards available for your PowerBook, check out the Macintosh Products Guide at www.apple.com/guide.

Using Bluetooth Devices

Your PowerBook comes with integrated Bluetooth technology that can help eliminate the need for the cables that traditionally connect devices together. Bluetooth-enabled devices can connect to each other wirelessly within a 10-meter (33-foot) range.

Bluetooth devices include:

- Computers (Mac to Mac)
- Cell phones
- Peripherals (keyboard, mouse, etc.)
- Personal Digital Assistants (PDAs)

With Bluetooth you can do the following:

- Communicate with your handheld PDA. You can perform a HotSync operation without cables or send your business card or calendar events directly to a colleague's PDA.
- Transfer files between computers, even Mac to PC, using the transfer utility. Apple still recommends the use of AirPort wireless networking, however, for anything but the smallest of files.
- Use your PowerBook to communicate with your Bluetooth-enabled mobile phone. You can also use your computer to respond to voice calls. Your phone can act as a modem to connect you to a wireless service provider, at speeds of up to 56 Kbps, so you can use your mobile phone to access the Internet.

For More Information on Bluetooth

You can get help using Bluetooth by opening the Bluetooth File Exchange application (located in Applications/Utilities) and choosing Help > Bluetooth Help. You can also find information on the Apple Bluetooth website at www.apple.com/bluetooth.

AirPort Wireless Internet and Networking

Your PowerBook is equipped with AirPort Extreme wireless technology, and is also fully compatible with earlier versions of the Airport Base Station. AirPort offers an easy and affordable way to provide wireless Internet access anywhere in the home, at work, or in the classroom. Instead of using traditional cables, AirPort uses wireless local area network (LAN) technology to provide wireless communication between multiple computers. Through a wireless network you can set up access to the Internet, transfer files, share a printer, play multiplayer games, and more.

Note: Wireless Internet access requires an AirPort Base Station (or other wireless hub) and Internet access (fees may apply). Some Internet service providers are not currently compatible with AirPort. Range may vary with site conditions.

How AirPort Provides Wireless Internet Access

With AirPort, you set up a wireless connection to a device known as a *base station,* which has a physical connection to the Internet. AirPort technology works like a cordless telephone. Using antennas built into your Powerbook, the AirPort Extreme Card in the computer makes a wireless connection to the base station, which is connected to the telephone line, DSL or cable modem, or an Ethernet network.

Connection to the Internet

AC outlet

AirPort Base Station
For More Information on AirPort

To purchase an AirPort Base Station, contact your Apple-authorized dealer or go to the Apple Store at www.apple.com/store.

Additional information on AirPort is available in AirPort Help. Choose Help > Mac Help and click Help Center, then click AirPort Help. You can also find information on the Apple AirPort website at www.apple.com/airport or the Apple Knowledge Base at kbase.info.apple.com.

Ethernet (10/100/1000Base-T)

Your computer comes with built-in 10/100/1000 megabit per second (Mbps) twisted-pair Ethernet networking capability, which you can use to connect to a network, including a Gigabit Ethernet network, or to a cable or DSL modem.
Connecting to a network gives you access to other computers. You may be able to store and retrieve information; use network printers, modems, and electronic mail; or connect to the Internet. You can also use Ethernet to share files between two computers or set up a small network. The Ethernet port on your PowerBook auto-detects other Ethernet devices. You don't need an Ethernet crossover cable when connecting to other Ethernet devices.

- Use 2-pair category 3 Ethernet cables to connect to a 10Base-T Ethernet network.
- Use 2-pair category 5 Ethernet cables to connect to a 100Base-T Ethernet network.
- Use 4-pair category 5 Ethernet cables to connect to a 1000Base-T Ethernet network.

For More Information on Using Ethernet

Additional information, including setting up an Ethernet network and transferring files using Ethernet, is available in Mac Help (see page 39). Choose Help > Mac Help and search for "Ethernet" or "network."

For information on networking products you can use with your PowerBook, check the Macintosh Products Guide at www.apple.com/guide.

External Video Support (DVI/VGA, Composite, and S-Video)

Your computer has a video output port that allows you to directly connect a display or projector with a DVI port. Use the included DVI-to-VGA adapter to connect your PowerBook to monitors and projectors that have VGA output. You can also use a DVI-to-ADC adapter (sold separately) to connect your PowerBook to an Apple flat-panel display.

The TV out port (also known as an *S-video out port*) on your computer lets you display images on a television, record computer images on a VCR, or play DVD-Video discs on your television.

If the device you want to connect has S-video, you can connect it directly to your TV out port. If the device you want to connect does not have S-video, you can use the S-video-to-composite adapter that came with your PowerBook.

DVI port

TV out port
When an external monitor or television is connected, you can either have the same image appear on both the internal display and the external monitor (known as *video mirroring*) or use the external monitor to extend the size of the Mac OS desktop (known as *dual display mode*). By default, your PowerBook starts up in dual display mode. Press the F7 (⌨) key to switch between video dual display and mirroring modes.

Note: Because of the display limitations of most televisions, images displayed on the television screen will be of lower quality than those on the built-in display or an external monitor.

Connecting an External Display or Projector

To connect an external display or projector to your computer with a DVI connection:

1 Turn on the external display or projector.

2 Connect the monitor cable to your PowerBook. Your PowerBook automatically detects the external display.

3 Adjust the resolution on the external display by opening System Preferences, clicking Displays, and clicking the Display tab (or use the Displays icon in the menu bar).

To connect an external monitor or projector to your computer with a VGA connection:

1 Turn on the external monitor or projector.

2 Connect the DVI-to-VGA adapter that came with your PowerBook to the external monitor or projector's VGA port.

3 Connect the DVI-to-VGA adapter to your PowerBook. Your PowerBook automatically detects the external monitor.

   Important To ensure that your PowerBook automatically detects the external monitor or projector, be sure the DVI-to-VGA adapter is plugged into the external monitor or projector first.

4 Adjust the resolution on the external monitor or projector.

For information on the supported external monitor resolutions, see "External Monitor in Dual Display or Video Mirroring Mode" on page 79.

   Important When using dual display or video mirroring with an external display connected to your PowerBook, keep the PowerBook open at least 90 degrees to ensure proper air circulation and heat dissipation over the keyboard.

Using Your PowerBook With the Display Closed

You can use your PowerBook with the display closed if the computer is connected to an external monitor, keyboard, and mouse, and the power adapter is plugged into the PowerBook and an outlet.

To operate your computer with an external monitor attached and the display closed, do the following:

1   Connect a USB keyboard and mouse to your PowerBook.

2   Follow the steps in the previous section to connect your PowerBook to an external monitor.

3   Close the PowerBook display to put the computer to sleep.

4   Wait a few seconds and then press any key on the external keyboard to wake the PowerBook.

Connecting a Television, VCR, or Other Video Device

To connect a device to the TV out port:

1   Connect an S-video cable to the TV out port (⚞) on your PowerBook (or use the S-video-to-composite adapter to connect a composite video cable) and connect the other end to your device.

2   If you want to send the sound from your PowerBook to the device, connect a miniplug-to-RCA cable (not included) from the headphone port (🎧) on your PowerBook to the audio input ports on your device.

3   Turn on the external device.

4   Hold down the Command (⌘) key and press the F2 key to detect the TV monitor.

5   To adjust how the images are displayed on the device, use the Displays pane of System Preferences.

   Important Some VCRs are equipped with copy-protection features that make it difficult to watch a DVD when your PowerBook is connected to your TV through your VCR. When watching a DVD, it is a good idea to connect your PowerBook directly to your TV.

Connecting an Apple Flat Panel Display

You can connect your PowerBook to an Apple Flat Panel display using a DVI-to-ADC adapter, available from your Apple-authorized dealer, an Apple Retail Store, or from the Apple Store at www.apple.com/store

For More Information on Using an External Monitor or TV

Additional information on using and configuring an external monitor is available in Mac Help (see page 39). Choose Help > Mac Help and search for "monitor" or "display."

Battery

When the external power adapter is not connected, your computer draws power from its battery. You can determine the charge left in your battery by looking at the battery level indicator lights on the battery itself. Press the button next to the lights and the lights glow to show how much charge is left in the battery. The indicator lights remain lit for a few seconds after you press the button. You can check the charge with the battery in or out of your PowerBook.

Important If only one flashing light is on, very little charge is left. If no lights are visible, the battery is completely drained and the computer will not start up unless the power adapter is connected. Plug in the power adapter for several hours to let the battery recharge, or replace the drained battery with a fully charged battery (see page 54).

Battery   Battery LEDs
Removing and Replacing the Battery

To remove the battery:

- Shut down your PowerBook or put it to sleep. Turn it over, and locate the battery release latches on either side of the battery. Slide both latches up. The battery should pop up slightly.
To replace the battery:

- Place the front of the battery into the battery compartment. Gently press the back side of the battery down until the battery latch locks into place.
Swapping Batteries While the Computer Is in Sleep

If your battery runs low while you are working, you can put your PowerBook to sleep and replace the battery with a charged one. The internal backup battery provides enough power to maintain the contents of RAM for three minutes while you change the battery.

Charging a Battery

When the power adapter that came with your computer is connected, the battery is recharging whether the computer is off, on, or in sleep. However, the battery will recharge more quickly if the computer is off or in sleep. You can monitor the battery charge level using the battery status icon in the menu bar:
The battery charge level displayed is based on the amount of power left in the battery with the applications, peripheral devices, and system settings (display brightness, Energy Saver settings, and so on) you are currently using. To make more battery power available, close applications and disconnect peripheral devices not in use, and adjust your Energy Saver settings.

Battery-Conservation Tips

The amount of work time your PowerBook battery can provide before you need to recharge depends on the applications and peripheral devices you're currently using with your computer and the steps you take to conserve power while you work.

For the best conservation of battery power, do the following:

- Disconnect bus-powered USB or FireWire devices when they are not in use.
- Quit open applications that you are not using.
- Remove CD and DVD discs when they are not in use.
- Make sure you are using the ALS system to adjust screen brightness according to the light in your working environment. For more information, see page 14.
- Turn AirPort off when not in use (use the AirPort status icon in the menu bar).
- Turn off Bluetooth using the Bluetooth status icon in the menu bar. You can add the Bluetooth status icon to your menu bar in the Bluetooth pane of System Preferences.
- Set the hard disk to spin down after a short time.
- Set your PowerBook to sleep after inactivity of five minutes or less.

Select the following options in the Energy Saver pane of System Preferences to save battery power:

- Choose Longest Battery Life from the Optimize Energy Settings pop-up menu, and then click More Options.
- Choose Battery Power from the "Settings for" pop-up menu, and then choose Reduced from the Processor Performance pop-up menu on the Options tab.

> **Warning** There is a risk of explosion if the battery is replaced by an incorrect type. Dispose of used batteries according to your local environmental guidelines. Do not puncture or incinerate.

For More Information on Your PowerBook Battery

Additional information is available in Mac Help (see page 39). Choose Help > Mac Help and search for "battery."

Using Your SuperDrive

You can install or run software from CDs using your SuperDrive. You can play multimedia on CD discs and music from audio CDs. Your SuperDrive can write music, documents, and other digital files on CD-R, CD-RW, and DVD-R discs. You can also play DVD movies and use most DVD discs.

Important The SuperDrive on your PowerBook supports standard circular 12 cm discs. Irregularly shaped discs or discs smaller than 12 cm are not recommended. Noncircular discs may become lodged in the drive.

Note: If you have older software that comes on floppy disks, contact the software manufacturer to see if the software is available on a CD or purchase an external USB floppy disk drive for your PowerBook G4 from your Apple dealer or the Apple Store (www.apple.com/store).

Inserting a CD or DVD Disc

To install or use programs from a CD or DVD disc, follow these steps:

1   With the computer turned on, insert the disc (with the label facing up) into the drive slot until you feel the drive catch the disc and take it the rest of the way in. The disc may need to be inserted nearly all the way in before the drive takes it in the rest of the way. This is normal.

Note: Some DVD discs are two-sided and require that you eject them, turn them over, and reinsert them to read all the available information.

2   When the icon for the disc appears on the desktop, the disc is ready to use.

Ejecting a Disc

To eject a disc, do one of the following:

■   Drag the disc icon to the Trash.

■   Press and hold the Media Eject (⏏) key on the keyboard until the disc ejects.

Allow the disc to fully eject before removing or reinserting it.

If you can't eject the disc, try the following:

■   Quit any applications that may be using the disc and try again.

■   Restart your computer and hold down the trackpad button during startup until the disc ejects.

Playing DVD Discs

To play a DVD-Video disc on your PowerBook, insert the DVD disc. DVD Player opens automatically and starts playing the disc.

If you use S-video to connect your PowerBook to a TV so that you can watch a DVD-Video on the TV screen, open Displays preferences, click Display, and select 720 x 480 NTSC (in the United States) or 720 x 576 PAL (in Europe and other regions).

Note: You can move the menu bar to the TV screen using the Arrange pane of Displays preferences.

You can easily connect your PowerBook to your stereo system. Use a miniplug-to-RCA cable (not included) to connect the headphone port (𝍀) on your PowerBook to the audio input ports on your stereo.

Recording CD-R and CD-RW Discs

You can record data on CD-R and CD-RW discs with Disc Burner.

1 Insert a blank disc in the optical drive.

2 In the dialog that appears, enter a name for the disc. An icon for the CD appears on the desktop.

3 Drag files and folders to the disc icon.

4 Choose File > Burn Disc, or select the disc and drag it to the Burn Disc icon in the Dock.

You can also record music on CD-R or CD-RW discs right from your iTunes library.

1 Click the iTunes icon in the Dock.

2 Select the playlist you want to record.

3 Insert a blank CD-R or CD-RW disc.

4 At the top of the iTunes window, click Burn CD.

Note: Some commercial CD players do not read CD-RW discs. If you are experiencing trouble reading a CD-RW disc, try using a different CD player or burning the information onto a CD-R.

For More Information

- For information about how to use iTunes to record music files on a CD-R disc, see the onscreen help for iTunes in the Help Center.
- For instructions on using DVD Player, choose Help > DVD Player Help.

Recording Information on a DVD

With your SuperDrive, you can record your own digital movies on a blank DVD-R (DVD-Recordable) disc. You can also record other kinds of digital data onto DVD-R discs (you can back up files, for example).

With applications like iDVD, you can create your own customized DVD, burn it on a blank DVD-R, and play it on most standard DVD players.

To burn an iDVD project onto a blank DVD:

1   Connect your PowerBook to its power adapter, so that the computer is not using battery power.

2   Open iDVD and open your completed DVD project.

3   Click the Burn button.

4   Insert a new blank DVD-R disc into the drive when prompted.

5   Click the Burn button again.

You can also record data on DVD-R discs with Disc Burner.

1   Connect your PowerBook to its power adapter, so that the computer is not using battery power.

2   Insert a blank DVD-R disc in the drive.

3   In the dialog that appears, enter a name for the disc and select the format you want to create. An icon for the DVD appears on the desktop.

4   Double-click the DVD icon, then drag files and folders to it.

5   Choose File >Burn Disc or select the disc and drag it to the Burn Disc icon in the Dock.

For more information about how to use iDVD, see the onscreen help for iDVD in the Help Center.

Keyboard Controls

You can quickly adjust settings, such as volume and screen brightness, and eject a CD or DVD disc using the keyboard controls.
Using the Standard Function Keys

You can quickly change a key from a control key to a standard function key by pressing the Fn key while you press the other key. Use the Keyboard pane of System Preferences to control the function keys.

Using the Embedded Numeric Keypad

Most desktop computer keyboards have a numeric keypad in addition to the regular keyboard keys. Your PowerBook keyboard has a numeric keypad incorporated in the standard keyboard keys. Keys used for the numeric keypad have a smaller secondary label.

Num Lock key
Numeric keypad

To use the numeric keypad, press the Num Lock key on the keyboard. The light on the Num Lock key turns on, indicating that the keypad is active. When you're finished, press the Num Lock key again to turn it off.

Note: When the numeric keypad is active, other keys and keyboard equivalents for menu commands (such as ⌘-Q to quit) are deactivated.

For More Information on Keyboard Controls

Additional information on configuring the keyboard controls and programmable function keys is available in Mac Help (see page 39). Choose Help > Mac Help and search for "keyboard."

Security Slot

You can purchase a security cable lock to protect your PowerBook. With a lock, you can secure your computer to a desk or table.

For More Information on Security Options

Additional information on the software security features of your PowerBook, including multiple user passwords and file encryption, is available in Mac Help (see page 39). Choose Help > Mac Help and search for "security" or "multiple users."

Working With Your Operating System

An operating system, or OS, is the environment that defines how the items on your computer's desktop are represented and how you interact with them.

Your computer comes with Mac OS X installed as the default operating system, and with Classic, an environment for using Mac OS 9 applications while the computer is using Mac OS X. Your computer cannot use Mac OS 9 as the primary operating system.

About Mac OS X

Mac OS X advanced technologies include an elegant user interface, incredible graphics capabilities, and added system stability and performance. Mac OS X manages your computer processes so you can concentrate on what you want to do. You don't need to restart your computer if something goes wrong with one software application—Mac OS X shuts down only that application so you can keep working without restarting the computer. The Mac OS X virtual memory manager allots the amount of memory your software applications need to operate efficiently.

When you're ready to learn more about Mac OS X, read *Welcome to Mac OS X*, a file on your computer's hard disk (in Documents/Learn More About Your Mac), which introduces the features of Mac OS X and provides tips for using Mac OS X to perform common tasks. If you've used other computers but are new to the Macintosh, read *Switching to the Mac* on your computer's hard disk (in Documents/Learn More About Your Mac). If you experience any problems while using Mac OS X, see the troubleshooting tips in the back of this manual or choose Help > Mac Help.

Important   Because Mac OS X is already installed on your computer, you don't need to follow the installation instructions in *Welcome to Mac OS X*. You need to follow the instructions in *Welcome to Mac OS X* only to log in and begin using Mac OS X.

Information About Software and Mac OS X

For information about the compatibility of software applications with Mac OS X, or to read more about Mac OS X, check the Apple website: guide.apple.com/macosx/.

Using Classic in Mac OS X

In addition to using Mac OS X applications, you can continue to use most Mac OS 9 applications in the Classic environment. When you start up Classic, Mac OS 9 software works in Mac OS X just as it did in Mac OS 9, but doesn't benefit from some Mac OS X features, such as the look of the new interface. Simply open a Mac OS 9 application or a document that requires Mac OS 9. If Classic isn't running, it starts up.

Once you start the Classic environment, it continues to run in the background, even if no Mac OS 9 applications are open. When Classic is running, Mac OS 9 applications and documents open faster. You can set up your computer to start Classic automatically when you log in to Mac OS X. Choose Apple ($\bullet$) > System Preferences, click Classic, and select "Start Classic when you log in."

To quit the Classic environment, click Stop in the Classic pane of System Preferences.

Important Your computer starts up only in Mac OS X. Mac OS 9 is not available as a startup disk and previous versions of Mac OS 9 should not be installed on this computer.

Adding Memory to Your Computer

This chapter provides information and instructions for installing additional memory in your PowerBook.

> **Warning** Apple recommends that you have an Apple-certified technician install memory. Consult the service and support information that came with your computer for instructions on how to contact Apple for service. If you attempt to install memory and damage your equipment, such damage is not covered by the limited warranty on your computer.

Installing Additional Memory

Your computer comes with two memory slots that you access by removing the memory door in the battery bay. Your PowerBook comes with 512 megabytes (MB) of Double Data Rate Random-Access Memory (DDR RAM) installed in the lower slot. Both memory slots can accept any memory module that meets the following specifications:

- Small Outline-Dual Inline Memory Module (SO-DIMM) format
- 1.25 inch or smaller
- 256 or 512 MB
- 200-pin
- PC 2700 DDR 333 Type RAM

The maximum amount of RAM you can install in your PowerBook is 1 GB, using 512 MB DIMMs in both RAM slots.

Installing Additional RAM

1 Shut down your computer. Disconnect the power adapter, phone cord, and any other cables connected to the computer.

2 Turn the computer over and locate the release latches on either side of the battery. Slide both latches up. The battery should pop up slightly.
Warning The internal components of your PowerBook may be hot. If you have been using your PowerBook, wait 30 minutes after shutting it down to let the internal components cool down before continuing.

3 Using a Phillips size 00 screwdriver, unscrew the memory door and remove it from the battery bay of your computer.
4 Touch a metal surface inside the computer to discharge any static electricity from your body.
5 If you already have a memory card installed in the slot you wish to use, remove it. Spread the tabs in the slot away from the notches in the memory card. The card should pop up slightly. Lift the memory card to a 30-degree angle and then gently slide the card out of the expansion slot.
6 Insert the RAM expansion card at a 30-degree angle. Line up the notch in the card with the small tab in the RAM expansion slot and slide the card into the slot until the gold edge is almost invisible. Then gently push the RAM expansion card into the expansion slot. You may feel some resistance.
7 Gently spread the small tabs in the expansion slot away from the notches and push the RAM expansion card down until the two snaps on either side of the card lock into place.
8 Replace the memory door and make sure it is lying flat before screwing it into place.
9 Replace the battery.
10 Reconnect the power adapter and any other cables.

Making Sure Your Computer Recognizes the New Memory

After installing additional memory in your PowerBook, check whether the computer recognizes the new memory. Do the following:

1 Start up your computer.

2 When you see the Mac OS desktop, choose Apple ($\bullet$) > About This Mac.

Total memory installed
in your PowerBook
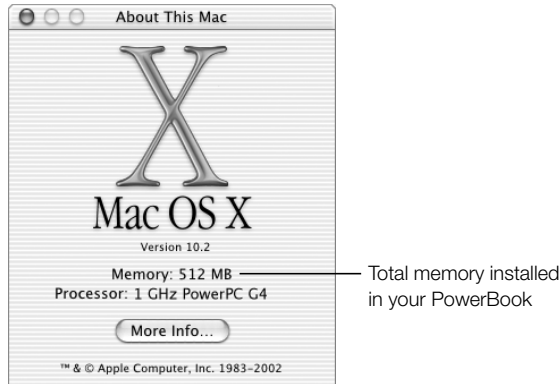

The total includes the amount of memory that originally came with the computer plus the new memory you added. For a more detailed breakdown of the amount of memory installed in your computer, click the More Info button.

If the memory is not recognized or your computer does not start up correctly, shut down your PowerBook and check the instructions again to make sure that the memory you installed is compatible with this PowerBook and that it is installed correctly. If you still have problems, remove the memory and consult the support information that came with the memory or contact the vendor who provided the memory.

Troubleshooting

Occasionally you may have problems while working with your PowerBook. Usually it's because your software isn't properly configured or you're using applications or software extensions that are not compatible with the version of the Mac OS (system software) installed on your computer. Other less likely sources include problems with the Mac OS (usually fixed by reinstalling your computer's system software or through a software update) and problems with your computer's hardware, such as the memory or hard disk.

When you experience a problem with your computer, it is important to remember that there is usually a simple and quick solution. When you encounter a problem, be aware of the conditions that led up to the problem. Making a note of things you did before the problem occurred will help you narrow down the possible causes of the problem and then find the answers you need. Things to note include:

- The applications you were using when the problem occurred. Problems that occur only with a specific application may indicate that the application is not compatible with the version of the Mac OS installed on your computer.

- Any software that you recently installed, especially software that added items to the System folder. Certain applications install extensions that may not be compatible with the Classic environment.

- Any new hardware (such as additional memory or a peripheral) that you installed.

Information in This Chapter

This chapter contains solutions to problems that prevent you from working with your computer, such as a system freeze or a computer that will not start up. You can find more troubleshooting information in Mac Help (see page 39), on the Apple Support website at www.apple.com/support, and in the Apple Knowledge Base at kbase.info.apple.com.

Problems That Prevent You From Using Your Computer

If the computer won't respond or the pointer won't move

- Press the Command (⌘) and period keys at the same time and, if a dialog appears, click Cancel.

- If that doesn't work, choose Apple (🍎) > Force Quit and select the application you would like to quit. If you are working in Classic, press Option–Command (⌘)–Esc. If a dialog appears, click Force Quit. Then save your work in any open applications and restart the computer to be sure the problem is entirely cleared up.

- If you are unable to force the application to quit, press and hold the Power button (⏻) for a few seconds to shut down the computer.

- If the computer still doesn't respond, try to restart it by simultaneously pressing the Command (⌘) and Control keys on your keyboard and the Power button (⏻).

If the problem occurs frequently, choose Help > Mac Help. Look at the information on how to prevent and solve problems. You may need to check for extension conflicts or reinstall your computer's system software. If the problem occurs only when you use a particular program, check with the program's manufacturer to see if it is compatible with your computer.

If the computer freezes during startup or you see a flashing question mark

- If you are using the Classic environment in Mac OS X, you might have an incompatible extension. Mac OS X does not use system extensions. To turn off extensions, open System Preferences, click Classic, click the Advanced tab, and choose Turn Off Extensions from the pop-up menu. Click Restart Classic.

- If that does not help, start up your PowerBook while holding down the C key and at the same time insert the software installer disc that came with your computer. (Make sure the Caps Lock key is not engaged.)

- If using your software installer disc is the only way you can start up your PowerBook, you need to reinstall your computer's system software. For instructions, see page page 73, look in Mac Help, or open the software installation or restore program and follow the onscreen instructions.

- If starting up from the software installer disc does not help, see "Using Apple Hardware Test" on page 75.

If the computer won't turn on or start up

- Make sure the power adapter is plugged into the computer and into a functioning power outlet.

- If you are using a power adapter other than the one that came with your computer, make sure it is a 65 W Apple Portable Power Adapter.

- Your battery may need to be recharged. Press the small button on the battery (see page 53). You should see one to five lights indicating the battery's level of charge.

- If that does not work, press the Power button (⏻) and immediately hold down the Command (⌘), Option, P, and R keys until you hear the startup sound a second time.

- If you recently installed additional memory, make sure that it is correctly installed and that it is compatible with your computer. See whether removing it allows the computer to start up (see page 65).

- If you are still unable to start up your computer, see the service and support information that came with your PowerBook for information on contacting Apple for service.

If the display suddenly goes black or if your system freezes while you are working

You will need to restart your system.

1   Unplug any devices that are connected to your PowerBook; don't unplug the power adapter.

2   Hold down the Command (⌘) and Control keys and press the Power button (⏻) to restart the system.

3   Let the battery charge to at least 10 percent before plugging in any external devices and resuming your work. To see how much the battery has recharged, look at the battery status icon in the menu bar.

Restoring Your Computer's Software

Use the software installer disc that came with your computer to install Mac OS X, applications, and Classic support.

Installing Mac OS X

1   Back up essential files, if possible.

2   Insert the software installer disc that came with your computer.

3   Double-click the Install Mac OS X icon.

4   Follow the onscreen instructions.

5   After selecting the destination disk for installation, click Options and continue following the onscreen instructions.

Installing Applications and Classic Support

1 Back up essential files, if possible.

2 Insert the software installer disc that came with your computer.

3 Double-click the "Install Applications and Classic Support" icon.

4 Follow the onscreen instructions.

Note: iCal, iChat, iMovie, iPhoto, and iTunes are part of Mac OS X. To install them you must follow the directions for installing Mac OS X.

Other Problems

If you have a problem with an application

■ For problems with software from a manufacturer other than Apple, contact the manufacturer. Software manufacturers often provide updates to their software on their websites. You can configure your PowerBook to automatically check for and install the latest Apple software using the Software Update pane of System Preferences. For more information, choose Help > Mac Help and search for "software update."

If you have trouble using AirPort wireless communication

■ Make sure you have properly configured the software according to the instructions that came with your AirPort Base Station.

■ Make sure the computer or network you are trying to connect to is running and has a wireless access point.

■ Make sure you are within antenna range of the network's access point or the other computer. Nearby electronic devices or metal structures can interfere with wireless communication and reduce the range. Repositioning or rotating the computer may improve reception.

■ Check the AirPort signal level:
   ■ In Mac OS X, up to four bars in the AirPort status icon in the menu bar.
   ■ In Classic, up to five green dots in the AirPort portion of the Control Strip.

■ See AirPort Help (in the Help Center) and the instructions that came with the wireless device for more information.

If you have trouble ejecting a disc

■ Quit any applications that may be using the disc and try again. If that doesn't work, restart the computer while holding down the trackpad button.

If you have problems with your Internet connection

- Make sure your telephone line or network cable is connected and functioning properly.

- If you are using a dialup Internet connection, make sure that your telephone cord is plugged into the modem port (marked with the icon ✆) and not the Ethernet port (marked with the icon ↔).

- See "Troubleshooting Your Connection" on page 96.

If you have a problem using your computer or working with the Mac OS

- If the answers to your questions are not in this book, look in Mac Help for instructions and troubleshooting information (see page 39).

- Check the Apple Support website at www.apple.com/support for the latest troubleshooting information and software updates.

Using Apple Hardware Test

You can use Apple Hardware Test to help determine if there is a problem with your computer's hardware.

To use Apple Hardware Test:

1   Insert the software installer disc that came with your computer.

2   Hold down the Option key and restart the computer.

3   Click Apple Hardware Test to select it from the available startup disks.

4   Click the arrow that points to the right.

5   Follow the onscreen instructions.

Locating Your Product Serial Number

The serial number for your PowerBook is located on a label inside the battery bay. For instructions on removing the battery, see "Removing and Replacing the Battery" on page 54. You can also see the serial number by opening Apple System Profiler (in Applications/ Utilities) and clicking the System Profile tab.

Specifications

This section provides basic product specifications. Additional information is available in Apple System Profiler (on your hard disk) and on the Internet at www.apple.com/powerbook and www.apple.com/support.

Apple System Profiler

You can use Apple System Profiler to find out detailed information about your specific model of PowerBook, such as the amount of built-in memory, hard disk size, devices connected, and the product serial number.

Apple System Profiler is on your hard disk in Applications/Utilities.

Click the triangles in the window to show and hide information in the different categories.

User name	Anne Johnson (annejohnson)

▶ Hardware Overview

▶ Memory Overview

▶ Network Overview
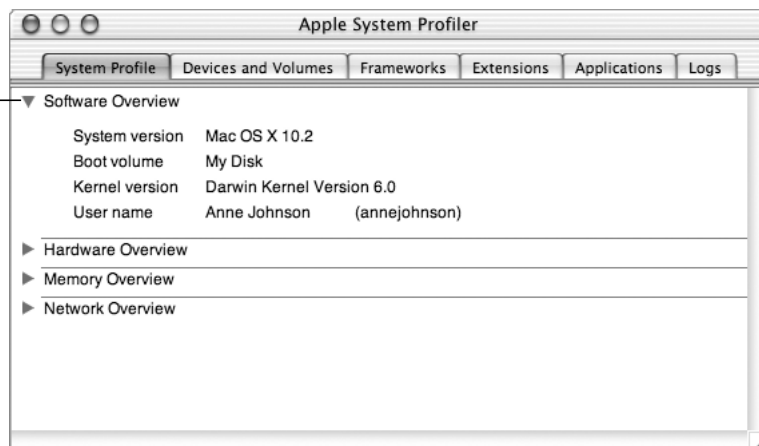

PowerBook Specifications

Processor, Memory, and Hard Disk

- *Processor:* 1 gigahertz (GHz) PowerPC G4 processor
- *Memory:* Minimum of 512 megabytes (MB); maximum of 1 gigabyte (GB)
- *Hard disk:* 60 GB

Video Memory and Graphics

- *Video memory:* 64 MB DDR SDRAM
- *Graphics controller:* nVidia GeForce4 440 Go

Modem

- *Modem standards:* K56flex and V.92

  Note: Appropriate ISP and telephone services required. Your ISP may not support all v.92 features. Modem will function according to v.90 standards if v.92 services are not available. Actual modem speeds lower; speed depends on connection rate and other factors.

- *Modem speed:* Up to 56 kilobits per second (Kbps)

  Note: Download speeds vary with line conditions and the modem capabilities of your Internet service provider (ISP). FCC regulations limit ISP transmission speeds to 53 Kbps in the United States.

AirPort Extreme Card

- *Wireless data rate:* Up to 54 megabits per second (Mbps)
- *Range:* Up to 150 feet (45 meters) in typical indoor use (varies with building)
- *Frequency band:* 2.4 gigahertz (GHz)

BlueTooth Module

- *Wireless data rate:* Up to 1 megabits per second (Mbps)
- *Range:* Up to 32.8 feet (10 meters) in typical indoor use (varies with building)
- *Frequency band:* 2.4 gigahertz (GHz)

Power Adapter

- *Input:* AC 100–240 volts (V), 50/60 hertz (Hz)
- *Output:* DC 24.5 V, 2.65 A

Battery

- *Output:* DC 10.8 V
- *Capacity:* 5100 milliampere-hours (mAh)

External Monitor in Dual Display or Video Mirroring Mode

With the display set to 1440 x 900 and millions of colors, an external VGA monitor or digital display can be supported at the following resolutions up to millions of colors:

■ 640 x 480, 640 x 870, 800 x 600, 832 x 624, 1024 x 768,
1152 x 870, 1280 x 960, 1280 x 1024, 1600 x 1200,
1792 x 1344, 1856 x 1392, 1920 x 1440, and 2048 x 1536

Note: Some external DVI displays from other manufacturers may not support all resolutions.

Choosing a resolution greater than 1280 x 854 in video mirroring mode causes the image on the external monitor to scale down (not take up the entire screen) to match the 1440 x 900 resolution of the internal display.

External Monitor in Display Closed Mode

When the PowerBook display is closed, an external VGA monitor or Apple flat-panel display can be supported at the following resolutions up to millions of colors:

■ 640 x 480, 640 x 870, 800 x 600, 832 x 624, 1024 x 768,
1152 x 870, 1280 x 960, 1280 x 1024, 1600 x 1200,
1792 x 1344, 1856 x 1392, 1920 x 1440, and 2048 x 1536

Note: Some external DVI displays from other manufacturers may not support all resolutions.

External S-Video or Composite Television (NTSC)

An external NTSC video device or TV can be supported at the following resolutions up to millions of colors:

■ 640 x 480, 720 x 480 (NTSC only), 800 x 600, 832 x 624, and 1024 x 768 at 60 Hz

External S-Video or Composite Television (PAL)

An external PAL video device or TV can be supported at the following resolutions up to millions of colors:

■ 640 x 480, 720 x 576, 800 x 600, 832 x 624, and 1024 x 768 at 50 Hz

Size and Weight

■ *Height:* 1.0 in. (26 mm)
■ *Width:* 15.4 in. (392 mm)
■ *Depth:* 10.2 in. (259.9 mm)
■ *Weight:* 6.80 lb. (3.08 kg)

Note: Weight varies depending on configuration and manufacturing process.

Operating Environment

- *Operating temperature:* 50˚F to 95˚F (10˚C to 35˚C)
- *Storage temperature:* −13˚F to 140˚F (−25˚C to 60˚C)
- *Altitude:* 3048m (10,000 ft.) maximum
- *Shipping altitude:* 10,668 m (35,000 ft.) maximum
- *Relative humidity:* 20% to 80% noncondensing

Care, Use, and Safety Information

Cleaning Your PowerBook

Follow these general rules when cleaning the outside of your computer and its components:

- Use a damp, soft, lint-free cloth to clean the computer's exterior. Avoid getting moisture in any openings.
- Don't use aerosol sprays, solvents, or abrasives.

Cleaning Your PowerBook Display

To clean your PowerBook screen, do the following:

- Shut down your PowerBook.
- Dampen a clean, soft, lint-free cloth or paper with water only and wipe the screen. Do not spray liquid directly on the screen.

Carrying Your PowerBook

If you carry your PowerBook in a bag or briefcase, make sure that there are no loose items (such as paper clips or coins) that could accidentally get inside the computer through an opening such as the optical drive slot.

Storing Your PowerBook

If you are going to store your PowerBook for an extended period of time, do one of the following to prevent your PowerBook battery from becoming completely depleted:

- Keep the power adapter connected.
- Fully charge your PowerBook battery before storing the computer.
- Fully charge and then remove your PowerBook battery when storing your computer (especially important when storing your computer for longer than 5 months).

Safety Instructions for Setting Up and Using Your Computer

Plugging in the Power Adapter

Always leave space around your power adapter. Do not use this equipment in a location where airflow around the power adapter or computer is confined. Always disconnect the power adapter and remove the battery before opening the computer to perform procedures such as installing memory or removing the hard drive.

Important Using a power adapter from another electronic device or third-party portable computer with your PowerBook G4 may damage your computer. Your PowerBook is designed to use the 65-Watt Apple Portable Power Adapter that came with your computer. Although you can use a 45-Watt Apple power adapter, it may not provide sufficient power during some activities and power may be drawn from the battery temporarily. If your battery discharges, you may need to use your 65-Watt Apple Portable Power Adapter to start up your computer.

Connecting a Phone Line to the Internal Modem

Always disconnect the phone cord before opening the computer to perform procedures such as installing memory or removing the hard disk.

Warning Do not connect a digital telephone line to the modem, because the wrong type of line could damage the modem.

Using Your PowerBook

When using your PowerBook or when charging the battery, it is normal for the bottom of the case to get warm. For prolonged use, place your PowerBook on a flat, stable surface. The bottom of the PowerBook case functions as a cooling surface that transfers heat from inside the computer to the cooler air outside. The bottom of the case is raised slightly to allow airflow that keeps the unit within normal operating temperatures.

Warning Do not place your PowerBook on a pillow or other soft material when it is on, as the material may block the airflow vents and cause the computer to overheat. Never place anything over your keyboard before closing the display. This can cause your computer to cycle on and off which may create excessive heat and drain your battery. Never turn on your computer unless all of its internal and external parts are in place. Operating the computer when it is open or missing parts can be dangerous and can damage your computer.

Important When using dual display or video mirroring with an external display connected to your PowerBook, keep the PowerBook open at least 90 degrees to ensure proper air circulation and heat dissipation over the keyboard.

General Safety Instructions

For your own safety and that of your equipment, always take the following precautions.

Disconnect the power plug (by pulling the plug, not the cord), remove the main battery, and disconnect the phone cord if any of the following conditions exists:

- You want to remove any parts.
- The power cord or plug becomes frayed or otherwise damaged.
- You spill something into the case.
- Your computer is exposed to rain or any other excess moisture.
- Your computer has been dropped or the case has been otherwise damaged.
- You suspect that your computer needs service or repair.
- You want to clean the case (use only the recommended procedure described earlier).

Important The only way to disconnect power completely is to unplug the power cord and phone cords, and remove the battery. Make sure at least one end of the power cord is within easy reach so that you can unplug the computer when you need to.

Warning Your power adapter came equipped with a three-wire grounding plug (a plug that has a third grounding pin). This plug will fit only a grounded AC outlet. If you are unable to insert the plug into an outlet because the outlet is not grounded, contact a licensed electrician to replace the outlet with a properly grounded outlet. Do not defeat the purpose of the grounding plug.

Be sure that you always do the following:

- Keep your computer away from sources of liquids, such as drinks, washbasins, bathtubs, shower stalls, and so on.
- Protect your computer from dampness or wet weather, such as rain, snow, and so on.
- Read all the installation instructions carefully before you plug your computer into a wall socket.
- Keep these instructions handy for reference by you and others.
- Follow all instructions and warnings dealing with your system.

Important Electrical equipment may be hazardous if misused. Operation of this product, or similar products, must always be supervised by an adult. Do not allow children access to the interior of any electrical product and do not permit them to handle any cables.

Warning Never push objects of any kind into this product through the openings in the case. Doing so may be dangerous and result in fire or a dangerous electric shock.

Apple and the Environment

Apple Computer, Inc., recognizes its responsibility to minimize the environmental impacts of its operations and products.

For more information

Go to www.apple.com/about/environment.

Ergonomics

Keyboard and trackpad

When you use the keyboard and trackpad, your shoulders should be relaxed. Your upper arm and forearm should form an angle that is slightly greater than a right angle, with your wrist and hand in roughly a straight line.

This   Not this
Use a light touch when typing or using the trackpad and keep your hands and fingers relaxed. Avoid rolling your thumbs under your palms.

This   Not this
Change hand positions often to avoid fatigue. Some computer users may develop discomfort in their hands, wrists, or arms after intensive work without breaks. If you begin to develop chronic pain or discomfort in your hands, wrists, or arms, consult a qualified health specialist.

Chair

An adjustable chair that provides firm, comfortable support is best. Adjust the height of the chair so your thighs are horizontal and your feet flat on the floor. The back of the chair should support your lower back (lumbar region). Follow the manufacturer's instructions for adjusting the backrest to fit your body properly.

You may have to raise your chair so your forearms and hands are at the proper angle to the keyboard. If this makes it impossible to rest your feet flat on the floor, you can use a footrest with adjustable height and tilt to make up for any gap between the floor and your feet. Or you may lower the desktop to eliminate the need for a footrest. Another option is to use a desk with a keyboard tray that's lower than the regular work surface.

External mouse

If you use an external mouse, position the mouse at the same height as your keyboard and within a comfortable reach.

Built-in display

Adjust the angle of the display to minimize glare and reflections from overhead lights and windows. Do not force the display if you meet resistance. The display is not meant to open past 130 degrees.

For more information

Go to www.apple.com/about/ergonomics.

Connecting to the Internet

It's best to configure your network and Internet connection using the Setup Assistant when you first set up Mac OS X. The assistant helps you enter your Internet configuration information, set up your networking software, and sign up for an Internet service provider (ISP) if you don't already have one.

If you did not already use the Setup Assistant to configure your Internet connection, you may be able to use it now. Open the Utilities folder (in the Applications folder) and double-click the Setup Assistant icon. If you don't want to use the Setup Assistant or if there is no Setup Assistant icon in the Utilities folder, you can use the information in this appendix to set up your connection.

Whether you connect through a dialup modem, cable modem, digital subscriber line (DSL), or an Ethernet local area network (LAN), you need specific setup information from your ISP or network administrator before you begin.

If you are connecting for the first time, changing your settings, or adding a new configuration, follow the steps that correspond to your connection method:

- Dialup modem with Point-to-Point Protocol (PPP) connection
- Cable modem, DSL, or LAN connection using these configurations:
    - Manual
    - DHCP
    - PPPoE

Important To set up your AirPort Base Station, use the AirPort Setup Assistant, located in Applications/Utilities.

Dialup (PPP) Connections

The most common way to connect to the Internet is through a dialup modem. You connect your modem to a phone line using a telephone cable (included with most Macintosh computers). Your modem uses Point-to-Point Protocol (PPP) to connect you to an ISP.

If you have an external modem, follow the setup instructions that came with your modem. If you have an internal modem, gather the following information from your ISP and have it available as you configure your network:

- Service provider name
- Account or user name
- Password
- Dialup telephone number
- Alternate dialup number
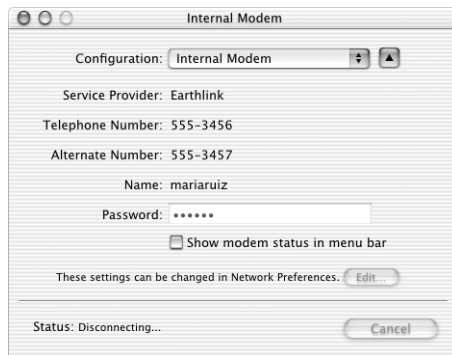

To set up your network preferences for the internal modem port:

1   Choose Apple ( ) > System Preferences.

2   Click Network.

3 In the Show pop-up menu, choose Network Port Configurations.

4 In the Port Configurations list, select Internal Modem and drag it to the top of the Port Configurations list to make it the preferred, or primary, network interface.

5 In the Show pop-up menu, choose Internal Modem.

6 Click the PPP tab.

7 Enter the information from your ISP and click Apply Now.

To test your Internet configuration, dial up your ISP and establish a connection:

1 Open the Internet Connect application (in the Applications folder).

2 Click Connect.

To connect automatically when you start a TCP/IP application, such as a web browser or email, do the following:

1 Click PPP Options (in the PPP pane of Network preferences).

2 Select the "Connect automatically when needed" checkbox.
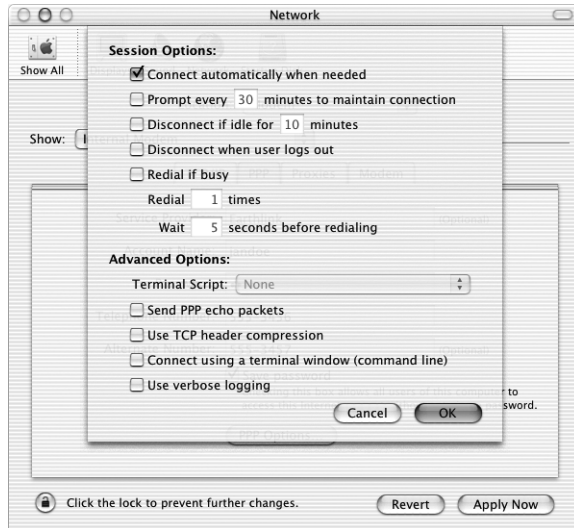

3 Click OK and Apply Now.

DSL, Cable Modem, or LAN Internet Connections

If you connect to the Internet through a DSL, cable modem, or LAN, ask your ISP or network administrator whether you should:

- Configure your connection manually. With a manual configuration, your ISP or network administrator provides a static IP address and other information that you enter in Network preferences.

- Use the Dynamic Host Configuration Protocol (DHCP). With a DHCP configuration, the DHCP server automatically enters the information for you.

- Use Point-to-Point Protocol over Ethernet (PPPoE). If you use a DSL modem and need a user name and password to connect to the Internet, you may need to configure your network to use PPPoE.

Obtain the following information and have it available as you configure your network:

- Domain name server (DNS) addresses, if necessary

- DHCP or manual IP address configuration

- IP address

- Router address

- Subnet mask

Note: If your ISP or local network does not provide DNS addresses, it may have a method of providing this information automatically.

First, set up your network preferences for the built-in Ethernet port:

1 Choose Apple ( ) > System Preferences.

2 Click Network.

3 In the Show pop-up menu, choose Network Port Configurations.

4 In the Port Configurations list, select Built-in Ethernet and drag it to the top of the Port Configurations list to make it the preferred, or primary, network interface.

Next, follow the instructions to configure your network manually, using DHCP, or using PPPoE, as instructed by your ISP or network administrator.

Manual Configuration

For a manual configuration, have your static IP address, router address, and subnet mask from your ISP ready as you do the following:

1 Choose Apple ( ) > System Preferences.

2 Click Network.

3 In the Show pop-up menu, choose Built-in Ethernet.

4 Click the TCP/IP tab, if necessary.

5 In the Configure pop-up menu, choose Manually.

6 Type the other information into the corresponding fields.

7 Click Apply Now.

Once you configure your network, your connection is ready. Open your web browser (or another TCP/IP application) to test your Internet connection.

DHCP Configuration

After you set up a DHCP configuration, the DHCP server automatically provides your network information.

To set up a DHCP configuration:

1   Choose Apple ( ) > System Preferences.

2   Click Network.

3   In the Show pop-up menu, choose Built-in Ethernet.

4   Click the TCP/IP tab, if necessary.

5   In the Configure pop-up menu, choose Using DHCP.

6   Click Apply Now.

Open your web browser (or another TCP/IP application) to test your Internet connection.

Note: Unless your ISP instructs you to do otherwise, ignore the DHCP Client ID field and the Search Domains field.

PPPoE Configuration

Some DSL-based ISPs use Point-to-Point Protocol over Ethernet (PPPoE). Check with your ISP to determine if you should connect using PPPoE. If you use a DSL modem and need a user name and password to connect to the Internet, follow these instructions.

1 Obtain this information from your ISP:

- User name and password
- Domain name server (DNS) address, if required.

2 Choose Apple ( ) > System Preferences.

3 Click Network.

4 In the Show pop-up menu, choose Built-in Ethernet.

5 Click the PPPoE tab and select "Connect using PPPoE."

6 Type your user name in the Account Name field and your password in the Password field. If you want all users of your computer to use the same connection method, select "Save password."

Note: To connect automatically when you start a TCP/IP application, such as a web browser or email, click PPPoE Options, then select "Connect automatically when needed."

7 Click the TCP/IP tab and in the Configure pop-up menu, choose either PPP or Manually, as instructed by your ISP. If you have a static IP address from your ISP, choose Manually and type the address in the IP Address field.

8 Type the Domain Name Server (DNS) addresses in the corresponding field, if applicable.

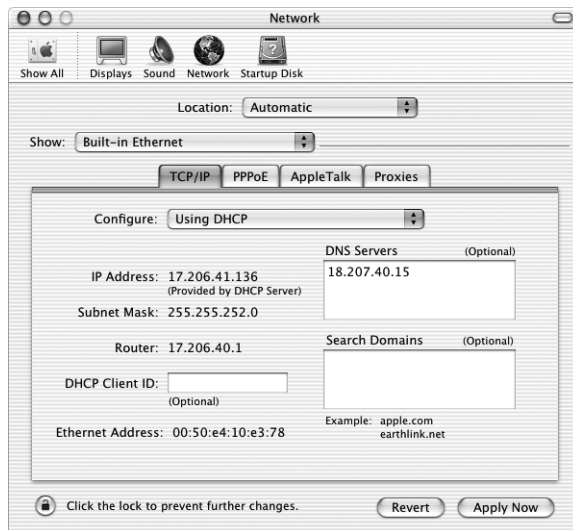

9 Click Apply Now.

Once you configure your network, your Internet connection is ready. You can open your web browser or other TCP/IP application to test your connection.

Important If you did not select the option to connect automatically, then you will need to open the Internet Connect application, choose the correct configuration, and then click Connect. For more information, open Internet Connect and choose Help > Internet Connect Help.

Troubleshooting Your Connection

Cable Modem, DSL, and LAN Internet Connections

If you can't connect to the Internet using your cable modem, DSL, or local area network (LAN), see the following steps.

Important Instructions that refer to modems do not apply to LAN users. LAN users may have hubs, switches, routers, or connection pods that cable and DSL modem users do not. LAN users should contact their network administrator rather than an ISP.

Check the cables and power supplies

Make sure all modem cables are firmly plugged in, including the modem power cord, the cable from the modem to the computer, and the cable from the modem to the wall jack. Check the cables and power supplies to Ethernet hubs and routers.

Cycle the power and reset the modem hardware

Cycle the power on your DSL or cable modem by turning it off for a few minutes then turning it back on. Some ISPs recommend that you unplug the modem's power cord. If your modem has a reset button, you can press it either before or after cycling the power.

PPPoE Connections

If you are unable to connect to your Internet service provider using PPPoE, first check the cables and power supplies, then cycle the power and reset the modem hardware.

Check System Preferences settings

Use System Preferences in the Apple menu to verify that you've selected PPPoE and to verify your

- account information
- TCP/IP settings
- primary network interface is set to Built-in Ethernet

Next, follow these steps:

1. Choose Apple ($\bullet$) > System Preferences.

2. Click Network.

3. In the Show pop-up menu, choose Network Port Configurations.

4. Drag Built-in Ethernet to the top of the Port Configurations list.

5. In the Show pop-up menu, choose Built-in Ethernet.

6. Click the PPPoE tab.

7. Select "Connect using PPPoE."

8. Check the Account Name field to be sure you have entered the correct information from your ISP.

9. Retype your password if you chose to save your password, to be sure it is correct.

10. Click the TCP/IP tab. Follow your ISP's instructions for setting up this pane.

11. Click Apply Now.

Network Connections

If you have two or more computers attempting to share an Internet connection, be sure that your network is set up properly. You need to know if your ISP provides only one IP address or if it provides multiple IP addresses.

If only one IP address is used, then you must have a router capable of sharing the connection, also known as network address translation (NAT) or "IP masquerading." For setup information, check the documentation provided with your router for setup information or ask the person who set up your network. The AirPort Base Station may be used for this routing function. For information on using the AirPort Base Station, check the onscreen help or visit the Apple AirPort website at www.apple.com/airport.

If you cannot resolve the issue using these steps, contact your ISP.

Communications Regulation Information

FCC Compliance Statement

This device complies with part 15 of the FCC rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation. See instructions if interference to radio or television reception is suspected.

Radio and Television Interference

This computer equipment generates, uses, and can radiate radio-frequency energy. If it is not installed and used properly—that is, in strict accordance with Apple's instructions—it may cause interference with radio and television reception.

This equipment has been tested and found to comply with the limits for a Class B digital device in accordance with the specifications in Part 15 of FCC rules. These specifications are designed to provide reasonable protection against such interference in a residential installation. However, there is no guarantee that interference will not occur in a particular installation.

You can determine whether your computer system is causing interference by turning it off. If the interference stops, it was probably caused by the computer or one of the peripheral devices.

If your computer system does cause interference to radio or television reception, try to correct the interference by using one or more of the following measures:

■ Turn the television or radio antenna until the interference stops.

■ Move the computer to one side or the other of the television or radio.

■ Move the computer farther away from the television or radio.

■ Plug the computer into an outlet that is on a different circuit from the television or radio. (That is, make certain the computer and the television or radio are on circuits controlled by different circuit breakers or fuses.)

If necessary, consult an Apple-authorized service provider or Apple. See the service and support information that came with your Apple product. Or, consult an experienced radio/television technician for additional suggestions.

Important Changes or modifications to this product not authorized by Apple Computer, Inc., could void the EMC compliance and negate your authority to operate the product.

This product was tested for EMC compliance under conditions that included the use of Apple peripheral devices and Apple shielded cables and connectors between system components. It is important that you use Apple peripheral devices and shielded cables and connectors between system components to reduce the possibility of causing interference to radios, television sets, and other electronic devices. You can obtain Apple peripheral devices and the proper shielded cables and connectors through an Apple-authorized dealer. For non-Apple peripheral devices, contact the manufacturer or dealer for assistance.

Responsible party (contact for FCC matters only): Apple Computer, Inc. Product Compliance, 1 Infinite Loop M/S 26-A, Cupertino, CA 95014-2084, 408-974-2000.

Industry Canada Statement

Complies with the Canadian ICES-003 Class B specifications. Cet appareil numérique de la classe B est conforme à la norme NMB-003 du Canada. Cet appareil numérique de la classe B est conforme à la norme NMB-003 du Canada.

VCCI Class B Statement

情報処理装置等電波障害自主規制について

この装置は、情報処理装置等電波障害自主規制協議会（VCCI）の基準に基づくクラス B 情報技術装置です。この装置は、家庭環境で使用することを目的としていますが、この装置がラジオやテレビジョン受信機に近接して使用されると、受信障害を引き起こすことがあります。

取扱説明書に従って正しい取り扱いをして下さい。

European Community

Complies with European Directives 72/23/EEC and 89/336/EEC.

Laser Information

Warning Making adjustments or performing procedures other than those specified in your equipment's manual may result in hazardous radiation exposure.

Do not attempt to disassemble the cabinet containing the laser. The laser beam used in this product is harmful to the eyes. The use of optical instruments, such as magnifying lenses, with this product increases the potential hazard to your eyes. For your safety, have this equipment serviced only by an Apple-authorized service provider.

If you have an internal Apple CD-ROM, DVD-ROM, or DVD-RAM drive in your computer, your computer is a Class 1 laser product. The Class 1 label, located in a user-accessible area, indicates that the drive meets minimum safety requirements. A service warning label is located in a service-accessible area. The labels on your product may differ slightly from the ones shown here.

Laser Specifications for Combo Drive

Laser on pickup unit when reading a DVD:

- *Type:* Semiconductor laser GaAs / In(GaAl)P/InGaP
- *Wavelength:* 655± 15 nm
- *Power out of objective lens:* 0.33 mW
- *Beam divergence:* 20º ∼ 35º (Typical 27º)

Laser on pickup unit when reading a CD:

- *Type:* Semiconductor laser AlGaAs / GaAs
- *Wavelength:* 784± 8 nm
- *Power out of objective lens:* Read = 1.0 mW, Write = 54.0 mW
- *Beam divergence:* 15º ∼ 19º (Typical 17º)

Laser Specifications for SuperDrive

Laser on pickup unit when reading a DVD:

- *Type:* Semiconductor laser AlGaInp
- *Wavelength:* 655 ∼ 664 nm (Typical 662 nm)
- *Power out of objective lens:* Read = 1.25 mW, Write = 22.4 mW
- *Beam divergence:* 18.5º ∼ 25º (Typical 23º)

Laser on pickup unit when reading a CD:

- *Type:* Semiconductor laser AlGaAs
- *Wavelength:* 779 ∼ 791 nm (Typical 785 nm)
- *Power out of objective lens:* Read = 1.0 mW, Write = 42.4 mW
- *Beam divergence:* 14.5º ∼ 19.5º (Typical 17º)

Exposure to Radio Frequency Energy

The radiated output power of the optional AirPort Card is far below the FCC radio frequency exposure limits. Nevertheless, it is advised to use the wireless equipment in such a manner that the potential for human contact during normal operation is minimized.

Mouse and Keyboard Information

The Apple optical mouse is a Class 1 LED product. This product complies with the requirements of European Directives 72/23/EEC and 89/336/EEC.

It also complies with the Canadian ICES-003 Class B Specification.

Battery

Warning Risk of explosion if battery is replaced by an incorrect type. Dispose of used batteries according to your local environmental guidelines. Do not puncture or incinerate.

High-Risk Activities Warning

This computer system is not intended for use in the operation of nuclear facilities, aircraft navigation or communications systems, or air traffic control machines, or for any other uses where the failure of the computer system could lead to death, personal injury or severe environmental damage.

ENERGY STAR® Compliance

As an ENERGY STAR® partner, Apple has determined that standard configurations of this product using the Mac OS X and Mac OS 9 operating systems meet the ENERGY STAR® guidelines for energy efficiency. The ENERGY STAR® program is a partnership with office product equipment manufacturers to promote energy-efficiency. Reducing energy consumption of office products saves money and reduces pollution by eliminating wasted energy.

Telephone and Apple 56K Modem Information

Notify Your Telephone Company

Some telephone companies require that you notify the local business office when you hook up a modem to their lines.

Information You Need in the United States

The internal modem complies with Part 68 of the FCC rules. On the back of this equipment is a label that contains, among other information, the FCC registration number and ringer equivalence number (REN). If requested, provide this information to your telephone company.

- *Ringer equivalence number (REN):* 0.68 The REN is useful to determine the quantity of devices you may connect to your telephone lines and still have all those devices ring when your telephone number is called. In most, but not all areas, the sum of the RENs of all devices connected to one line should not exceed five (5.0). To be certain of the number of devices you may connect to your line, as determined by the REN, you should contact your local telephone company to determine the maximum REN for your calling area.
- *Telephone jack type:* USOC, RJ-11 An FCC-compliant telephone cord and modular plug are provided with this equipment. This equipment is designed to be connected to the telephone network or premises wiring using a compatible modular jack that complies with Part 68 rules. See the installation instructions for details.

Telephone Line Problems

If your telephone doesn't work, there may be a problem with your telephone line. Disconnect the modem to see if the problem goes away. If it doesn't, report the problem either to your local telephone company or to your company's telecommunications people.

If disconnecting the modem eliminates the problem, the modem itself may need service. See the service and support information that came with your Apple product for instructions on how to contact Apple or an Apple-authorized service provider for assistance.

If you do not disconnect your modem when it is adversely affecting the telephone line, the telephone company has the right to disconnect your service temporarily until you correct the problem. The telephone company will notify you as soon as possible. Also, you will be informed of your right to file a complaint with the FCC.

The telephone company may make changes in its facilities, equipment, operations, or procedures that could affect the operation of your equipment. If this happens, the telephone company will provide advance notice in order for you to make the necessary modifications to maintain uninterrupted service.

The internal modem will not work with party lines, cannot be connected to a coin-operated telephone, and may not work with a private branch exchange (PBX).

Telephone Consumer Protection Act

The Telephone Consumer Protection Act of 1991 makes it unlawful for any person to use a computer or other electronic device to send any message via a telephone fax machine unless such message clearly contains, in a margin at the top or bottom of each transmitted page or on the first page of the transmission, the date and time it was sent and an identification of the business or other entity, or individual sending the message and the telephone number of the sending machine of such business, entity, or individual.

Information You Need in Canada

The Industry Canada (IC) label identifies certified equipment. This certification means that the equipment meets certain telecommunications network protective, operational, and safety requirements. The Department does not guarantee the equipment will operate to a user's satisfaction.

Before installing this equipment, make sure that you are permitted to connect to the facilities of the local telecommunications company. Be sure you use an acceptable method of connection to install the equipment. In some cases, you may extend the company's internal wiring for single-line individual service by means of a certified telephone extension cord. Be aware, however, that compliance with these conditions may not prevent degradation of service in some situations.

Repairs to certified equipment should be made by an authorized Canadian maintenance facility designated by the supplier. Any equipment malfunctions or repairs or alterations that you make to this equipment may cause the telecommunications company to request that you disconnect the equipment.

In Canada, contact Apple at: 7495 Birchmount Road, Markham, Ontario, L3R 5G2, 800-263-3394

Warning Users should ensure for their own protection that the electrical ground connections of the power utility, telephone lines, and internal metallic water pipe system, if present, are connected together. This precaution may be particularly important in rural areas.

Users should not attempt to make such connections themselves, but should contact the appropriate electric inspection authority or electrician.

- *Load number:* 0.2 The load number (LN) assigned to each terminal device denotes the percentage of the total load to be connected to the telephone loop that is used by the device, to prevent overloading. The termination of a loop may consist of any combination of devices, subject only to the requirement that the sum of the load numbers of all devices does not exceed 100.

- *Telephone jack type:* CA-11

Informations Destinées aux Utilisateurs Canadiens

L'étiquette d'Industrie Canada identifie un matériel homologué. Cette étiquette certifie que le matériel est conforme à certaines normes de protection, d'exploitation et de sécurité des réseaux de télécommunications. Le Ministère n'assure toutefois pas que le matériel fonctionnera à la satisfaction de l'utilisateur.

Avant d'installer ce matériel, l'utilisateur doit s'assurer qu'il est permis de la raccorder au réseau de l'enterprise locale de télécommunication. Le matériel doit également être installé en suivant une méthode acceptée de raccordement. Dans certains cas, le câblage appartenant à l'enterprise utilisé pour un service individuel à ligne unique peut être prolongé au moyen d'un dispositif homologué de raccordement (cordon prolongateur téléphonique).

L'abonné ne doit pas oublier qu'il est possible que la conformité aux conditions énoncées ci-dessus n'empêche pas la dégradation du service dans certaines situations. De fait, les enterprises de télécommunication ne permettent pas que l'on raccorde un matériel aux prises d'abonnés, sauf dans les cas précis prévus par les terifs particuliers de ces enterprises.

Les réparations de matériel homologué doivent être effectuées par un centre d'entretien canadien autorisé désigné par la fournisseur. La compagnie de télécommunications peut demander à l'utilisateur de débrancher un appareil suite à des réparations ou à des modifications effectuées par l'utilisateur ou en raison d'un mauvais fonctionnement.

Veuillez contacter Apple pour des informations supplémentaires:

Apple Canada, Inc.

7495 Birchmount Road

Markham, Ontario

Canada L3R 5G2

Service à la clientèle d'Apple Canada : 800-263-3394

Pour sa propre protection, l'utilisateur doit s'assurer que tout les fils de mise à la terre du secteur, des lignes téléphoniques et les canalisations d'eau métalliques, s'il y en a, soient raccordés ensemble. Cette précaution est particulièrement importante dans les régions rurales.

Avertissement L'utilisateur ne doit pas tenter de faire ces raccordements lui-même; il doit avoir recours à une service d'inspection des installations électriques ou à un électricien, selon le cas.

- *Numéro de charge :* 0.2 L'indice de charge (IC) assigné à chaque dispositif terminal indique, pour éviter toute surcharge, le pourcentage de la charge totale qui sera raccordée à un circuit téléphonique bouclé utilisé par ce dispositif. La terminaison du circuit bouclé peut être constituée de n'importe quelle combinaison de dispositifs pourvu que la somme des indices de charge de l'ensemble des dispositifs ne dépasse pas 100.
- *Type de prise téléphonique :* CA-11

Information You Need in the United Kingdom

This terminal equipment is intended for direct connection to the analogue Public Switched Telecommunications Network and is approved for use within the United Kingdom with the following features:

- Modem facility
- Autocalling facility
- Autoanswer facility
- DTMF signaling

Operation in the absence of proceed indication or upon detection of proceed indication

This product is in conformity with relevant regulatory standards following the provisions of European Council Directives 73/23/EEC (Low Voltage Directive) and 89/336/EEC amended by 92/31/EEC (EMC Directive).

Informationen fur Deutschland

Diese Modem-Karte ist als Endeinrichtung vorgesehen und muss an ein TAE mit F-Kodierung angeschlossen werden. Diese Endeinrichtung ist in Konformität gemäss Niederspannungsrichtlinie 73 / 23 / EWG sowie EMC-Richtlinien 89 / 336 / EWG und 92 / 31 / EWG.

Informations pour la France

Ce matériel est conforme aux normes applicables de sécurité éléctrique d'après la directive 73 / 23 / CEE et aux normes applicables de comptabilité éléctromagnétique d'après la directive 89 / 336 / CEE, modifié par la directive 92 / 31 / CEE.

Information You Need in Australia

All telecommunications devices are required to be labelled as complying to the Australian telecommunications standards, ensuring the health and safety of the operator and the integrity of the Australian telecommunications network. To provide compliance with the Australian Communications Authority's technical standards, please ensure that the following AT commands are maintained:

- ATB0 (ITU/CCITT operation)
- AT&G0 (no guard tone)
- AT&P1 (33/66 pulse dial make/break ratio)
- ATS0 = 0 or ATS0 = 1 (no answer or answer greater than one ring)
- ATS6 = 95 (DTMF period between 70–255 ms)
- ATS11 = 95 (DTMF period between 70–255 ms)

For calls that are automatically generated, a total of three call attempts are allowed to a telephone number, with a minimum period between calls of 2 seconds. If the call does not connect after three attempts, 30 minutes must expire before automatic redialing may be initiated. Failure to set the modem (and any associated communications software) to the above settings may result in the modem being non-compliant with Australian telecommunications standards. Under these circumstances a user could be subject to significant penalties under the Telecommunications Act 1997.

This modem must be properly secured in order for you to use it. Telecommunications network voltages exist inside the computer and the telecommunications line connection must be removed before opening the computer.

Information You Need in New Zealand

This modem is fully approved to operate on the New Zealand telecommunications network under Telepermit number PTC 211/01/096. All telecommunications devices are required to hold a Telepermit and be labelled accordingly with the approved Telepermit number to comply with the New Zealand telecommunications standards, ensuring the health and safety of the operator and the integrity of the New Zealand telecommunications network. To ensure compliance, all calls that are automatically generated should not make more than 10 call attempts to the same number within any 30 minute period with a minimum period between calls of 30 seconds. Failure to adhere to these standards may result in the modem being non-compliant with New Zealand Telecom standards. Under these circumstances a user could be subject to significant penalties.

Important The grant of a Telepermit for any item of terminal equipment indicates that only Telecom has accepted that the item complies with minimum conditions for connection to its network. It indicates no endorsement of the product by Telecom, nor does it provide any sort of warranty. Above all, it provides no assurance that any item will work correctly in all respects with another item of Telepermitted equipment of a different make or model, nor does it imply that any product is compatible with all of Telecom's network services.
